DETAILED ACTION

Response to Arguments

1. Applicant's arguments see Remarks, filed February 11, 2009, with respect to claims 1-6, 16-22, 30-35, and 37 have been fully considered and are persuasive. The 35 U.S.C. 102(e) rejection of claims 1-6, 16-22,30-35, and 37 has been withdrawn.

Allowable Subject Matter

2. Claims 1, 2, 4, 5, 6, 11, 16, 18, 21, 22, 25-35, and 37 are allowed.

3. The following is an examiner's statement of reasons for allowance: Independent claims 1, 18, and 32 identify the unique distinct feature of: "A method comprising: designing a target comprising a plurality of near-neutral patches surrounding a plurality of neutral gray patches in different lightness levels ranging from white to black; defining a desired neutral aim in a device independent profile connection space (PCS); receiving a plurality of measurements of the plurality of near-neutral patches for different lightness levels from the target printed by an imaging system using a first plurality of sets of color values of the imaging system's color space, derived based on a second plurality of sets of color values of the PCS and in accordance with a print table of a color profile of the imaging system mapping color value sets from the PCS to color value sets in the imaging system's color space, the second plurality of sets of color values defining the near-neutral patches of the target in the PCS; and computing a third plurality of sets of color values for the

imaging system to output a corresponding plurality of neutral gray outputs at the different lightness levels, by interpolation, based at least in part on the received measurements, wherein the interpolation comprises: retrieving a fourth plurality of sets of color values in the imaging system's color space corresponding to plurality of nodes in the PCS defining an area in a lightness level containing a neutral node of the lightness level and associated with up to nine computing the corresponding set of the third plurality of sets of color values based on the fourth plurality of sets of color values; constructing eight triangles by first dividing the area into four quadrangles and subdividing the quadrangles into a total of 8 triangles; searching exhaustively the eight triangles to determine a triangle containing the neutral node of the lightness level; computing the third plurality of sets of color values by three point interpolation.”

The closest prior art Dalrymple'016 teaches interpolating outputs from look-up tables by selecting a set of look-up tables for use with a specific color polyhedron.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled “Comments on Statement of Reasons for Allowance.”
